

# PROJECT - Software & Robotics CLOUD IMAGE SYNCHRONIZATION...

... TO POWER AI-DRIVEN IMAGE RECOGNITION

In the dynamic landscape of the laundry industry, image recognition has emerged as a game-changer. But setting up an image recognition system can be a cumbersome process, demanding a large library of images for each category. This is where we step in with our project!

## THE PROJECT

The mission is to create a cutting-edge cloud architecture that will revolutionize image recognition systems, making image sharing effortless.

Imagine a world where your image recognition systems not only identify new images but also automatically suggest existing images that closely match the new ones.

## YOUR PROFILE

Calling all students in programming or software engineering with an interest in cloud computing.

If you're ready to dive deep into the coolest blend of cloud architecture and AI, this project is your ticket to tech stardom.

Let's turn laundry into a high-tech adventure!

## INWATEC LAUNDRYNERDS

Inwatec ApS develops and produces machines and robots for industrial laundries worldwide. We are a fast-moving company in rapid development and our team is creative and dynamic, with very dedicated employees. We love our informal work environment, where every idea is taken seriously and everybody is treated equally. On Fridays, we meet at our bar for an after-work beer, a barbecue or some ping-pong.

Sounds good? What are you waiting for?
